

# Web Architecture

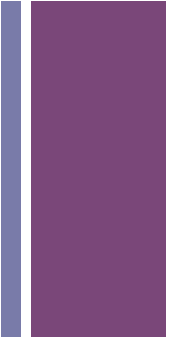

Jacob Portnoff

# + Agenda

- Background
- Howdyai Botkit
- Bookmarklets
- Web Scraping

# + Background

- Pittsburgh, PA native
- Carnegie Mellon University
- US Army
- UC Berkeley – I School
- Voise

# + Howdyai

- howdy.ai is a 2015 startup
- They make bots and tools to make bots
- One of the most popular open-source toolkits for making bots
- Integrated with slack

# + Botkit

- botkit.ai is howdyai's open-source toolkit
- It works with a lot of different services
- Runs on Node.js

# Chatbots online

- Popular means of engaging customers on websites
- Mostly handled by simple bots and human customer service representatives
- Google, Apple, Facebook, and Amazon have built 'personal assistants'

# + Node.js

- Open-source, cross-platform JavaScript run-time environment
- Created in 2009 by Ryan Dahl
- JavaScript normally only works client-side but Node.js operates server-side

# + Node.js

- Download latest stable version
  - <https://nodejs.org/en/>
- Command: `npm -version`
  - Ensures node package manager is installed correctly

# Slack bots

- Slack allows bots for a variety of purposes
- Handle mundane tasks, personal assistants, etc

# Setting up botkit

1. Install node.js (get one recommended for most users)
  1. <https://nodejs.org/en/>
2. Install botkit
  1. <https://github.com/howdyai/botkit>
  2. Git clone or download and unzip
3. Use command line to cd to botkit directory, use node package manager to install basics
  1. `cd botkit-master`
  2. `npm install`
  3. `npm test`
4. On slack, create a new bot (I haven't been able to test this on the ischool slack, but it should work fine)
  1. <https://my.slack.com/services/new/bot>
  2. Add a name to your slack bot
  3. Get token
  4. Run from command line, replace MY\_TOKEN: `token=<MY_TOKEN> node examples/slack_bot.js`
5. On slack, under Apps, search for your bot name and load the bot
  1. Your bot should be online and available, write 'Hi' and get a response

# Creating slack bot

- Create a botkit controller
- Setup the node.js webserver
- Create controller.hears elements
- Run from command line
  - `./node web_arch_bot.js`

# Creating slackbot con't

```
var Botkit = require('botkit');

var controller = Botkit.slackbot({
  clientId: process.env.clientId,
  clientSecret: process.env.clientSecret,
  studio_token: process.env.studio_token,
});
```

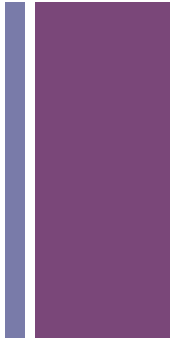

# + Creating slackbot con't

```
controller.setupWebserver(process.env.port,function(err,webserver) {  
  controller.createWebhookEndpoints(controller.webserver);  
  controller.createOauthEndpoints(controller.webserver);  
});
```

# Creating slackbot con't

```
controller.hears('hello','direct_mention,direct_message', function(bot, message) {  
  bot.reply(message,'Howdy!');  
});
```

```
controller.hears('tacos','direct_mention,direct_message', function(bot, message) {  
  bot.startConversation(message, function(err, convo) {  
    convo.say('Oh boy, taco time!');  
    convo.ask('What type of taco do you want?', function(answer, convo) {  
      var taco_type = answer.text;  
      // do something with this answer!  
      // storeTacoType(convo.context.user, taco_type);  
      convo.say('YUMMMM!!!'); // add another reply  
      convo.next(); // continue with conversation  
    });  
  });  
});
```

# In class botkit assignment

- Sometimes school is hard and you need a good excuse.
- Create the basis for a slack bot that when you ask it for an excuse, it randomly generates one for you
- If you ask it for 'help' it generates an excuse.

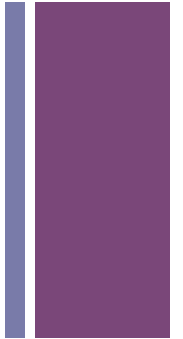

# Bookmarklets

- A small software application stored as a bookmark in a web browser, which typically allows a user to interact with the currently loaded web page in some way.
- Largely written in JavaScript

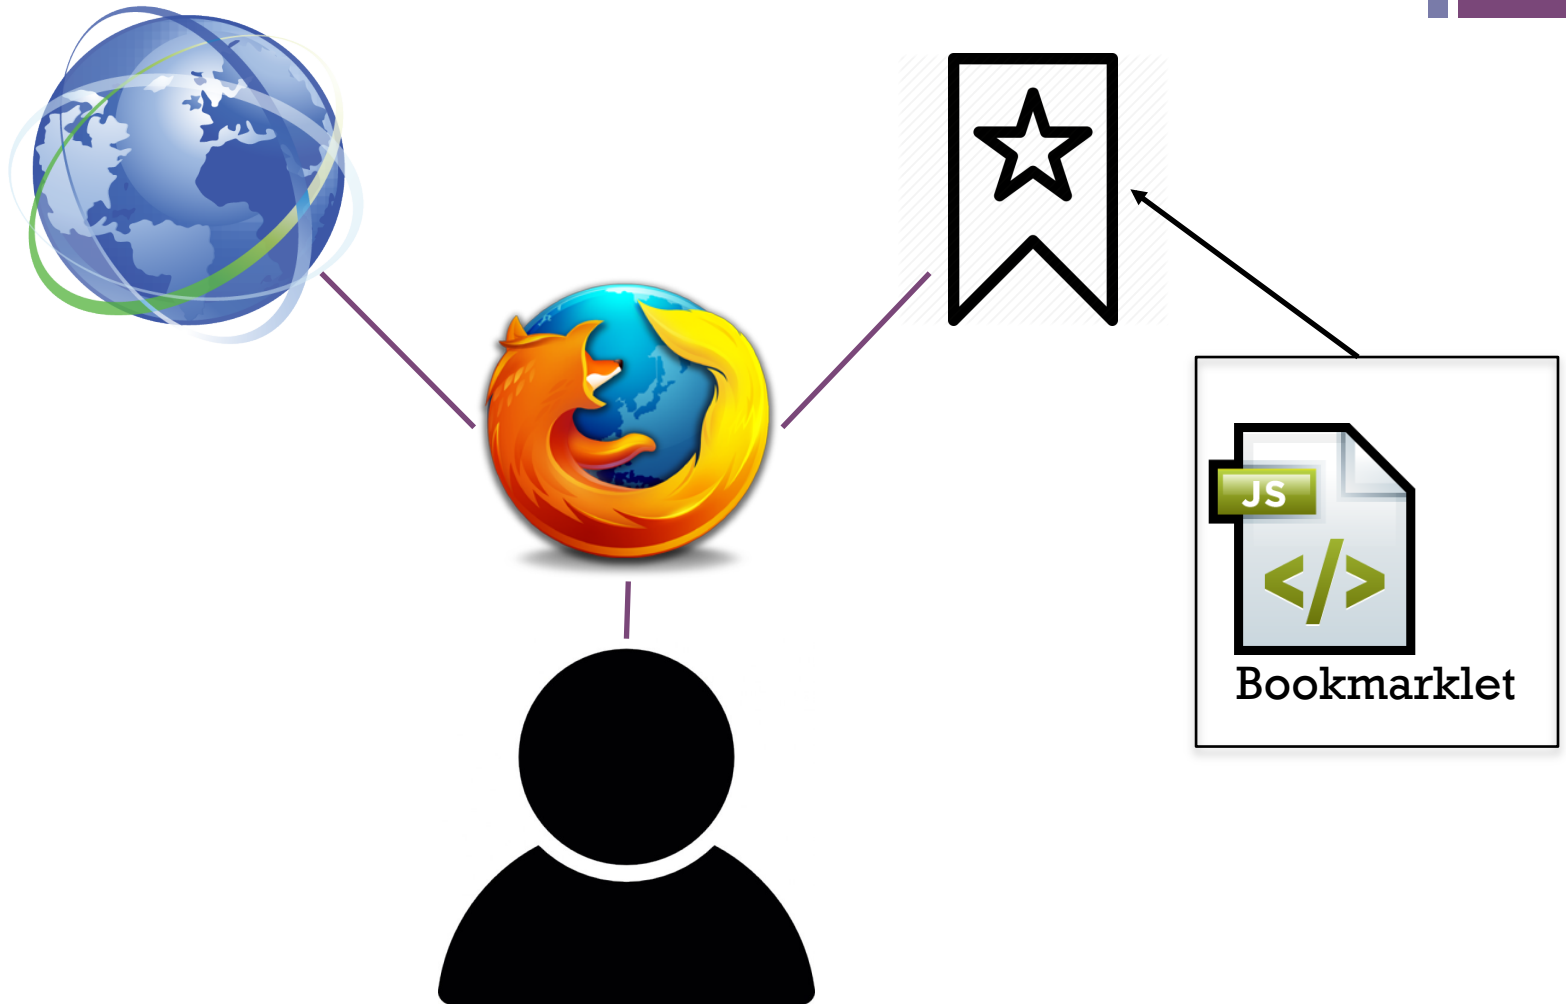

# + Pinterest

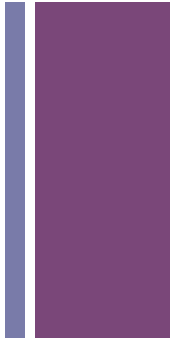

- Founded in 2009, it makes use of “Pin it” button
- Ease of use, good marketing, and simple technology made it a success

# + Bookmarklet Essentials

# + Bookmarklet Examples

- Bookmarklets can be standalone
  - Layout Grid
  - Better Readability
  - <https://www.hongkiat.com/blog/100-useful-bookmarklets-for-better-productivity-ultimate-list/>
- They can also be associated with an outside web service or site
  - Pinterest
  - Facebook

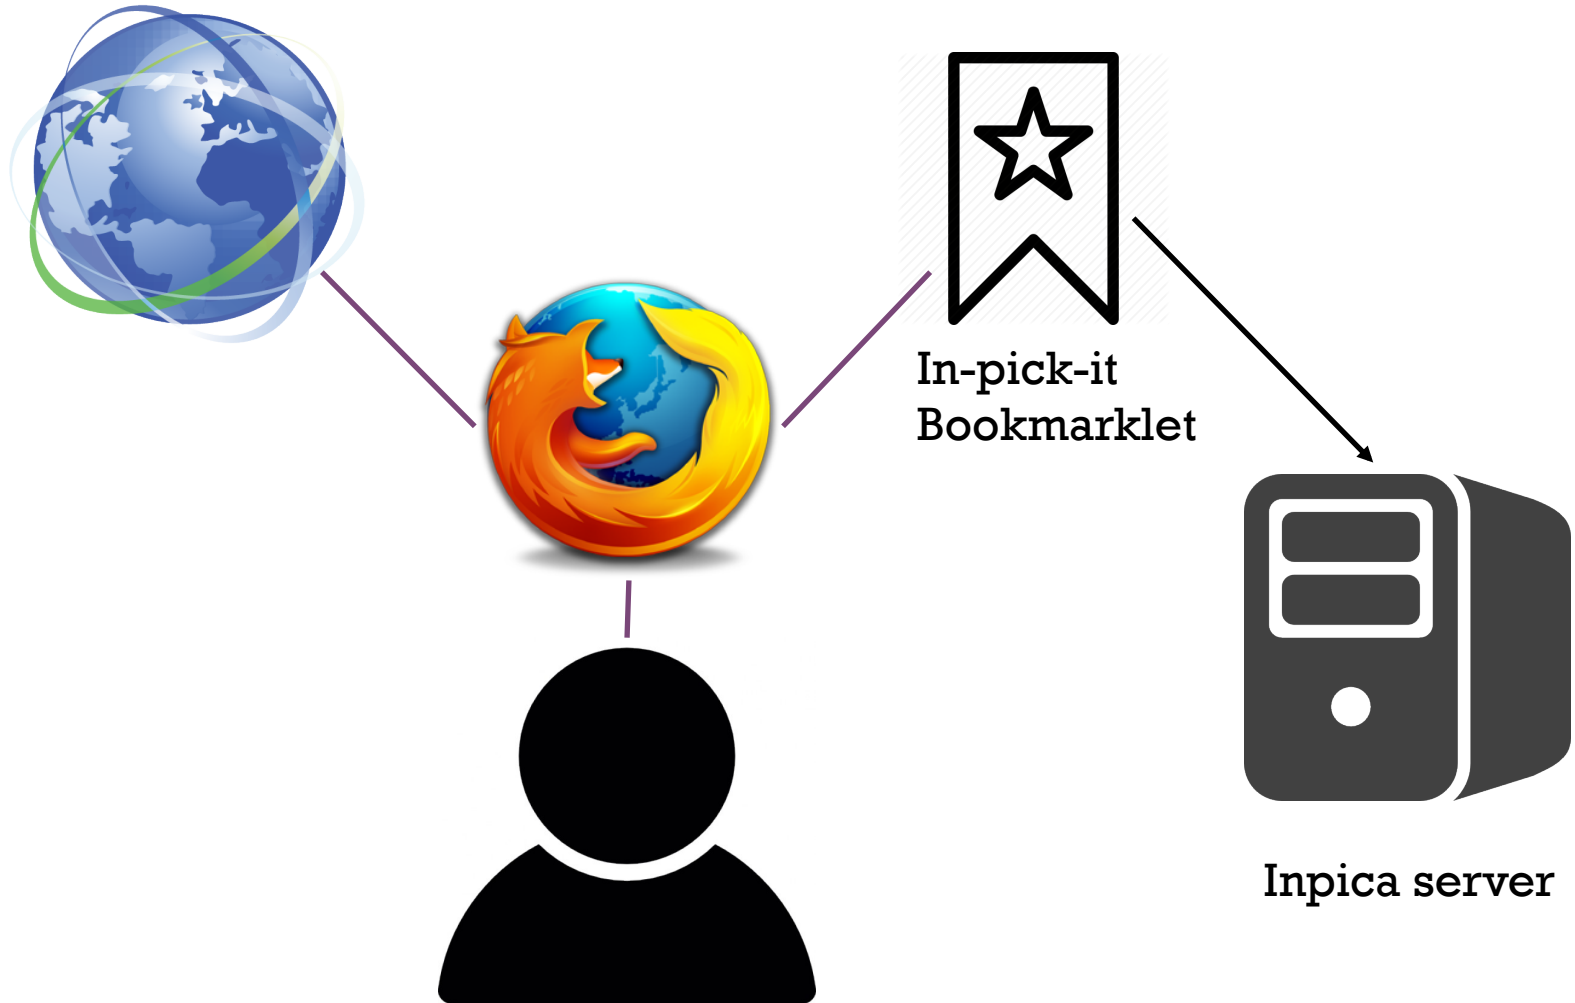

# In-Pick-It Example

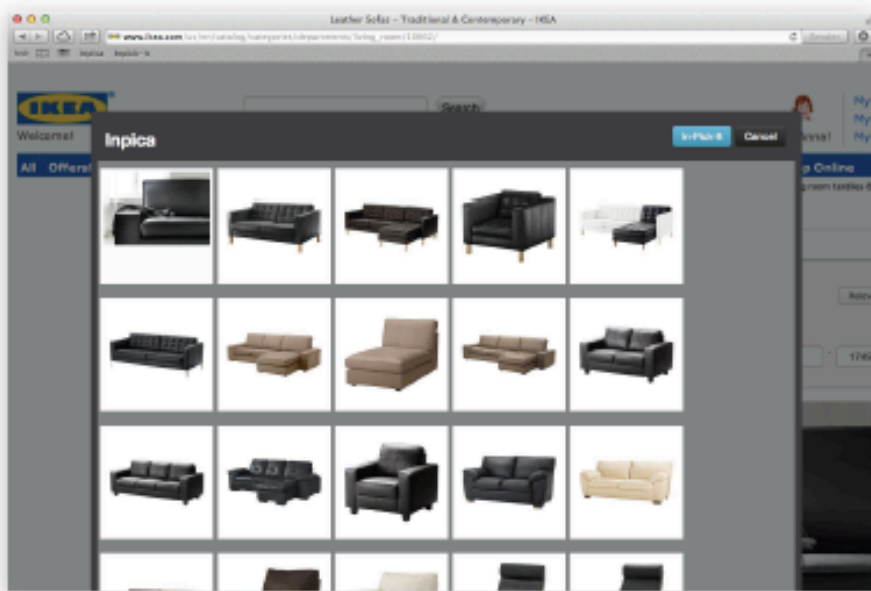

- Designed by my I School Final Project team: Arian Shams, Gaurav Shetti, Naila Alkhalawi, and myself
- Patent accepted: May 31, 2016
- Our bookmarklet allowed gathering of product data by many people for one project

# + Bookmarklet Building

- `javascript:(function(){// your code here})();`
- Try to build something that will work on 100% of websites
  - Avoid looking for tag ids/names unless necessary
- If you need libraries, you'll have to append them in your bookmarklet
- Remember DOM basics on ordering and arrangement if overlaying

# Bookmarklet In Class Assignment

- `javascript:(function(){// your code here})();`
- Your goal is to append or edit the website
- In honor of your teacher, take 15 minutes to work on building a bookmarklet that places his picture front and center of a website and grays out the rest

# When to use Bookmarklets

## Individual

- When you don't have lots of bookmarks!
- To take actions on websites you can't control
- To provide convenience while browsing the web

## Company

- When you want to provide a service off the websites you control
- When the service is desired on websites that you cannot coerce/cajole into accepting your code
- To provide customers with functionality on websites you can't control

# Bookmarklet Tips

- Different browsers behave differently!
- Be careful with outside bookmarklets; it could be malicious code
- Be careful with including libraries; conflicts are possible depending on the website
- Recognize that your 'unique' code is visible
